

Use Case: Add guidance document

Participating Actors:

The use case is initiated by the citizen (who wishes to add his guidance document for review).

Brief Description:

The feature allows citizens who know how to help about an emergency situation to request the admin to add a new help guidance document to the system (by uploading the document). A citizen might be a doctor, or trained about the topic, etc...

Assumption:

The citizen is logged into the system.

Basic Flow (Add guidance document)

1. The use case starts when a user elects to add a new help-guidance document
 - a. The system will provide an interface to upload a document, select a topic (health) and add description about that document.
2. The user uploads a pdf document containing the help-guidance information, filling the topic and description fields.
 - a. The system will validate if all fields are filled appropriately.
3. The user clicks on submit request.
 - a. The system provides the feedback message "Thank you for your help, your request will be reviewed and the document will be added to the list of others."

Alternative Flows

- A1, on 2,a => if a user does not upload the document, or fill the description or choose the topic, the system denies submitting the request.

Step B: Create a Corresponding User Story for Add Guidance document

Add Guidance Document Motivation

As a citizen,

I want to add a guidance document,

So that I might contribute to society by helping people who are willing to help others in case of an emergency situation.

Add Guidance Document Acceptance Criteria

- Given a user is logged into the system
- When the citizen select completely fills the form to add a guidance document and press submit
- Then the system processes the request and sends the request to the admin.

Business Rules

- The user can request as many requests as he can.
- The document to be chosen must be in PDF format.
